

Thanks very much for buying a Lateral Sound **Praxis** We hope you enjoy it as much as we enjoyed designing and building your pedal.

Praxis runs on 9v. You'll need to connect a DC adapter with centre negative polarity like this: 

Delay 'chop' section.
LFO2 can be bypassed with toggle switch

Delay time-mod section. LFO2 can be bypassed with toggle switch

Time between repeats

Number of repeats (careful with overload at high settings!)

FX Loop Return (from other pedal/effects outputs)

9v DC In

Blend of clean/delayed signal

Output

Set to minimum if FX loop is not in use

FX Loop Send (to other pedal/effects inputs)

Punch/Infinite Repeats:
When Praxis is bypassed this switch lets you 'punch' into the delay.
When Praxis is engaged this switch maxes-out the Feedback control for walls of infinite noise

Input

Bypass switch
